

ALWAYS ON

Protect your investment every time with AgriShield® seed treatments.

Successful seasons start with quality seed treated to control diseases and insects. AgriShield seed treatments help sorghum plants more effectively take root and fulfill their genetic potential.

Options translate to opportunities.

Trusted and proven, AgriShield® ST sets the standard for early-season protection against seedborne and soilborne diseases like pythium, fusarium, rhizoctonia and downy mildew. AgriShield ST offers excellent seed safety and improves root development to increase water and nutrient uptake for stronger early growth and performance. Help reduce the need for replants by establishing strong stands.

TARGETED DISEASES:

- Rhizoctonia
- Fusarium
- Pythium
- Downy mildew
- Seed rots
- Soilborne diseases

AgriShield® PLUS combines the disease protection of AgriShield ST with a safener to protect sorghum crops from injury caused by crop sensitivity to S-metolachlor. AgriShield PLUS should be your first choice for ensuring full stands and vigorous early growth without herbicide crop injury.

TARGETED DISEASES:

- Rhizoctonia
- Fusarium
- Pythium
- Downy mildew
- Seed rots
- Soilborne diseases

AgriShield® MAX combines protection against early-season diseases and pests with a seed safener. Provide your sorghum crop with the best possible start for the best possible yields. AgriShield MAX not only protects young plants against insects, disease and herbicide injury, it also helps improve seedling vigor and tolerance to stressful conditions such as drought, cold, nutrient deficiency and heat.

TARGETED DISEASES:

- Rhizoctonia
- Fusarium
- Pythium
- Downy mildew
- Seed rots
- Soilborne diseases

TARGETED INSECTS:

- Aphids
- Green bugs
- Cinch bugs
- Wireworms

Seed protection doesn't get more powerful than this.
